

Oklahoma Elementary Math Happenings

February 2014

Blueprint for 2014-2015 Assessment

The Blueprints are coming, the Blueprints are coming!

Actually, they are HERE! Good thing that was Paul Revere's job and not mine.

The blueprints for the 2014-2015 assessment show how the points on the test are divided among the standards. Also, Fifth and Sixth Grade will have a reference sheet and those links are live too. All of these are available, by grade level, on the assessment page of the SDE website ([click here](#) and scroll down to the 2014-2015 school year) and on my website ([click here](#)) on the appropriate grade level page.

Teaching more than one grade? Is Vertical Alignment a priority? [Click here](#) to find 3rd -6th Grade all on one page.

REAC3H Regional SUMMIT

Still haven't gotten a chance to see the Pre-K math standards? Wondering when you will get to see the ELA standards? There are still a few spots left for the **REAC3H Summit in Norman on the 19th**! Kayla Hindman and I will be presenting the "who, what, when, where and why's" of both the Math and the ELA Standards for Pre-Kindergarten. This is an opportunity to have input on your standards, their format, building a glossary, etc. This will be the last time we will meet with a large group of teachers before they are released for public comment.

SNEAK PEEK: First time ever appearing TOGETHER:
Prekindergarten ELA and MATH STANDARDS!!
REAC3H Summit, Norman, OK
February 19, 2014
[Registration](#)

Literature Connection

Alexander and the Terrible, Horrible, No Good, Very Bad Day is a favorite among teachers and one of the reasons Australia is a top dream destination for elementary students. Well, that and kangaroos.

Borrowing from this student and teacher favorite, I created a PowerPoint of comparison problems using the Model Draw Strategy to use with teachers at the most recent REAC3H Regionals. The PowerPoint is available on my website ([click here](#)) and is completely open so you can edit it and use it for your class. Look for more book titles coming soon! If you improve it or have ideas to add, please consider sharing them on our

Facebook page at #OKMATH. There are 950+ Oklahoma Educators connected that would love to use them too!
